

Electronic Sensors, Inc.

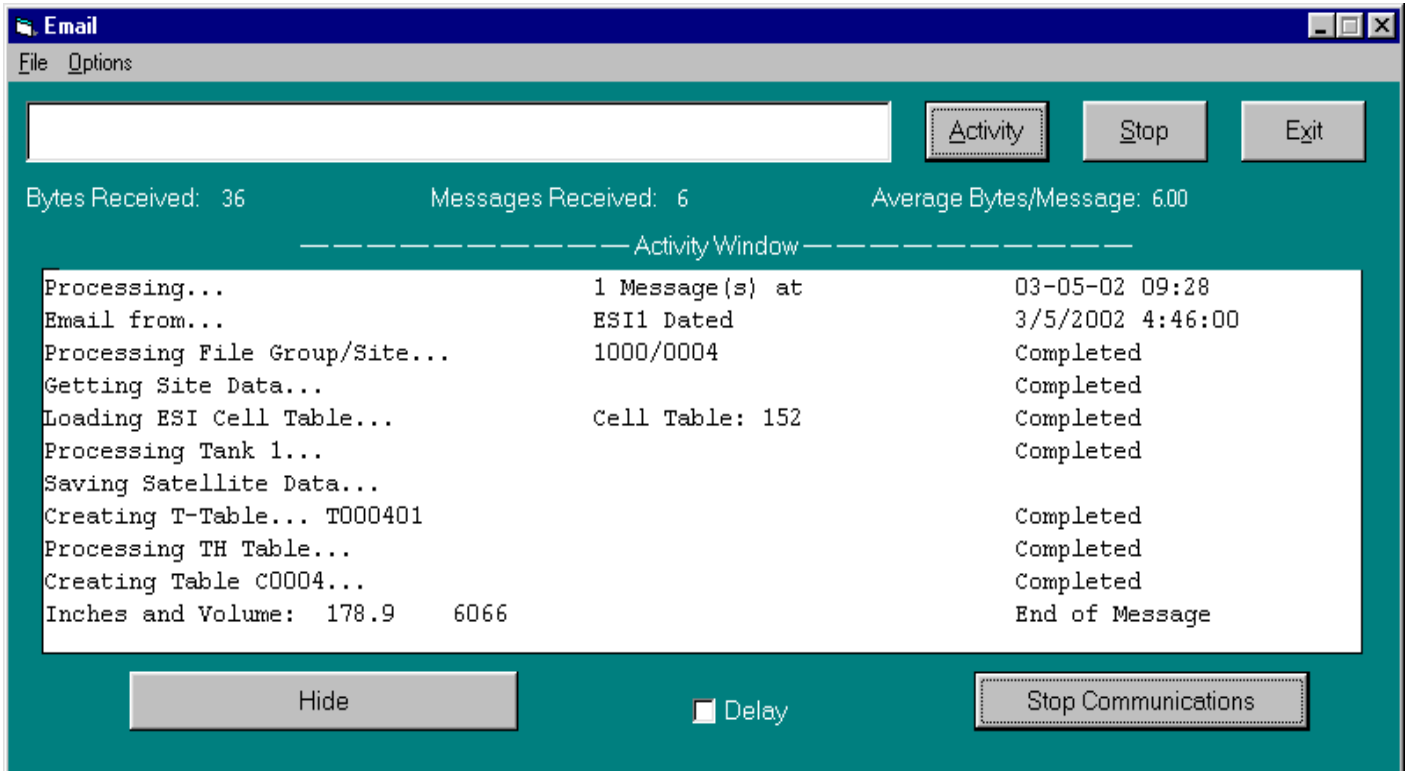

Level Devil® Email Receiver

DESCRIPTION

Several Remote Transmit Units (RTU), manufactured by Electronic Sensors, Inc., send tank information to remote users using the internet email system. The *Level Devil*® Email Receiver is an add-on software program used to support the main *Level Devil*® software program by adding the ability to process tank information arriving from internet email. The program runs in the background on any Windows based PC and seamlessly opens, converts and stores site information into the *Level Devil*® database. For all cases of collecting tank information (the Email Receiver being just one means) the means of receiving and converting the data is transparent to the operator just as it should be so more operator's time may be spent on managing the information and not on how the data is collected.

OPERATIONS

Email Receiver uses a Windows based MAPI compliance email server. It runs in the background on any windows based PC along with the MAPI server. Email Receiver wakes up every so often (programmable) and checks for unopened Email arriving from RTU as specified in the *Level Devil*® sites database. Email Receiver will not open up email addressed from non Electronic Sensors, Inc. RTUs. Upon opening the email, the message is read, converted and stored in the proper *Level Devil*® database. The email message is left open so it will not be processed again.
