## Model IGP20 Gauge Pressure Transmitter

### DESCRIPTION & OPERATION

The IGP20 Gauge Pressure Transmitter reliably measures absolute and gauge pressure of gasses, vapors and liquids. These process variables are converted into standard analog DC signals (4-20mA) which are supplied to the process control and monitoring equipment. Unique internal design makes this sensor stable over a wide temperature range and protects the device from over pressure to greater than 3000 psi. With years of past performance, this device is one of the most reliable and asked for gauge sensor.
